Enter your "Students" response:

Students do have access.

Not sure how they will be supported, other than by faculty.

Yes they can access it anywhere.

I assume most students are aware of Google, however they would need to be able to do some clicking and perhaps open a google account/email.

no purchase necessary.

Enter your "Ease of Use" response

It is very intuitive.

Google is very reliable.

Yes there is technical support available from Google and likely the Center for Teaching and Learning

Enter your "Cost" response

This use of Google will not cost me or the students.

My institution does have funding available for technologies and uses it to afford us login, memberships and access to various software and apps.

Yes, we have the Center for Teaching and Learning to support us.

Google classroom to name one. Others I have explored, Flipgrid, Explain Everything, WebEx, Microsoft teams, Screencast-o-matic.

Your Teaching and Pedagogical Considerations response:

Yes it supports learning outcomes.

Google has a variety of areas that are used in highschool and I believe more college and

universities should continue to use it for their students sake. Google hangouts will allow students to have a meeting with one student or many, I can have a group chat/ meeting with up to 100 people. There is the function to have voice and video calls for up to 10 people. This will work well for group projects.

Your "Interaction" response:

It appears I am able to meet in the google hangout and interact with them.
There is also a chat feature.

Your "Organisational Issues" response:

Our center for teaching and learning is my go-to for all technology based questions and support. They are the ones I usually get my ideas from and gain access to technology to enhance my teaching.

Much of what we access can be linked to our LMS and where possible that is what I do. I feel we should use our LMS primarily as it could be too much to ask students to have various sign ins and places to find content.

Your "Networking" response:

I feel it is always a great idea to network beyond the course and school.

This technology is available to anyone that wishes to have it.

Google has ability to share files through Google Docs. This is a great way for students to collaborate, and later as colleagues.

Your Security and Privacy response:

I am uncertain of this area and I could and will contact our privacy officer. I believe we are to keep all information secure and private.

Using Google, I assume it is private and only accessed by those invited.

Using the LMS and providing links will be the best way to ensure only those enrolled in the course can access the material.
