

have access to the technology at home. The Learning Resource Centre has computers available for loan. Perhaps only at school. Critical, creative, collaborative thinking skills, along with communication skills. Need to know various platforms and technological skills/terms. Our teaching experience, based on COVID, is that learning will take place online during the next semester and possibly, beyond.

Here I am connecting to Padlet.

Technology use

I often tell students to extend their learning and use any resources to help them. How can I help them to build their understanding through the use of technology properly?

Create more experiential learning opportunities while teaching remotely

Students enjoyed being provided the opportunity to use different technology tools and would like to be provided more chances to do so. As instructors, we need to identify more ways for students to practice different tools. This can help provide more meaningful learning experience.

Technology tools to provide different experiences

I aim on introducing more databases in my course. These will be optional tools that students can use. I will select databases which are freely available. I plan to spend some time discussing these tools using Zoom. Students can have the option to explore these tools on their own time. By finding databases which cover the entire course, this helps provide diverse experiences too.
