Enter your "Students" response:

Yes but they would need to set-up a google account.

Faculty can help with the set-up. It is not supported by the College.

Yes, they can access the technology everywhere.

Many student already seem familiar with google apps.

Very few digital skills are required - basic presentation skills.

---

Enter your "Ease of Use" response

Very easy to use intuitively. I learned the technology within minutes - colourful, attractive and effective.

I am not sure how reliable or easy it is to maintain because I have only just learned how to use but because it is a google app, I am sure it is stable and tech support would be available.

---

Enter your "Cost" response

Yes, I can do it easily and develop with students during class.

I know that CTL has different tech that we can access but this is free app.

I have a colleague who introduced met to this app and would support my progress.

OER would be able to help me with this tech.

---

Your Teaching and Pedagogical Considerations response:

Yes, since jamboard is a collaborative app - it not only helps with engagement but I plan to use it to design for implementing role plays.

The process will help students to share ideas, develop thematic content and develop plan for implementation.

---

Your "Interaction" response:

Yes, it does facilitate the interactions - it is really the focal point of this technology.

Faculty sets up the jamboard but everyone contributes to it. It can also be saved so that others who were not in class could add to it or review it.

---

Your "Organisational Issues" response:

Our organization is very supportive of using technology in the classroom.

However, as we are a microsoft organization, there is little guidance regarding google products.

---

Your "Networking" response:

I am not sure how valuable this tech is for supporting use in social media but it would be effective for students to use this in other courses as a presentation tool.

---

Your Security and Privacy response:

Yes, there are privacy policies for google apps.

I would contact CTL and if required, our privacy officer.
