Creating a Feedback Loop

To address learners who feel they aren't receiving regular, non-graded feedback, I would use Kahoot, Mentimeter and Padlet to create a feedback loop so learners can experiment with what they've been taught in a lesson. Examples include surveys, multiple choice quizzes and collaborative active learning activities.

Addressing the learners' challenge with Kahoot, Mentimeter and Padlet

Using Kahoot, Mentimeter and Padlet would allow for students to receive real-time feedback while they attend class. Taking accessibility into consideration, these technologies are available on any device, and provide students the opportunity to answer questions and engage in comprehension checks. They wouldn't be required to download apps; rather, they could access surveys and activities via Internet browsers, and complete them in a matter of minutes.
