

Eating meat reverently - cultured meat

Title:
Question: How do we eat real meat without harming animals?

grow meat from muscle cells in bioreactor	foodsystem: farm cells + tissue engineering bioreactor - stable environment harvest - "nuggets"
new food production	improve animal welfare ↓ greenhouse gas emissions <u>pot</u>
↓ climate change	<u>mistakes:</u> - animal cruelty/welfare. - risk of viruses to animals/humans. - loss of food supply - greenhouse gas emissions ↑
↑ animal standards	27% land mass - animal husbandry.
meet global demands.	improve land conditions/ecosystem improve indigenous landways restoration of land/climate
cost factor ↓	→ advance to plants etc clothing - not easy to do - ↓\$ - price parity
stewardship	cheese rennet an example - max pos impact ice cream " " " "

future potential technology from tissue engineering animal products to provide for global needs and improve climate conditions.
Needs stewardship + time to work on technology
