

Wish there was audio to hear how these questions or way of communicating is done appropriately.

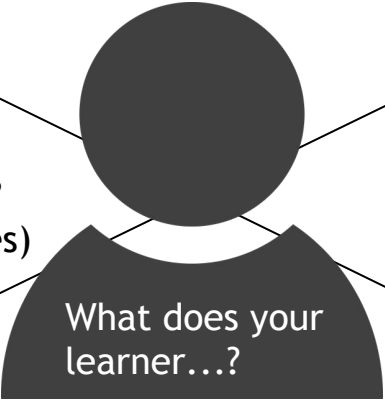

The simulation was concise and had very direct steps.

Found it easy to learn. The platform was user friendly.

Really enjoyed and appreciated both the positive and negative feedback provided.

Would like to see a variety of other photos as there are many different places where this skill can occur.

### Think and Feel? (preoccupations)

### What does your learner...?

The ability to ask questions in the zoom debrief afterwards to help clarify any outstanding questions not addressed during the simulation.

### Hear? (influences)

### See? (environment)

They like the images associated with the text to help visualize each step.

Really liked the multiple choice questions that come right after each step to test their knowledge.

### Say and Do? (behaviour)

They enjoy being able to debrief after the simulation together with their classmates and the facilitator.

They want videos associated with each step or a complete video demonstrating the proper way to complete the skill.

### Pain Points?

Not clear how long the simulation would take them.

Great alternative to powerpoints and zoom calls.

### Gain Points?

Allowed them to dive deeper into a skill that's not easily taught in an online environment.
