What's In It For Me

By: Jonathan Cobb

This is a very common question all the students have when taking COMP 92 (Computer Business Applications), so students can't see past "it's just a boring computer class" and view it as busy work, but it is anything but, it's an essential foundation for any business employee (or employee in general) the list is usually numerous but there are a few of the WIIFMs....

Practical Skills: teach practical skills that are highly relevant in the modern workplace.

Employability: Proficiency in computer business applications is a valuable asset on your resume. Many employers expect job candidates to be proficient in these tools.

Efficiency: Learning how to use business applications effectively can make you more efficient in your schoolwork and future career.

Entrepreneurship: If you're interested in starting your own business or pursuing an entrepreneurial path, these skills are essential. You'll need to create business plans, financial reports, and marketing materials.

Data Analysis: Excel is a powerful tool for data analysis.

Career Advancement: As you progress in your career, knowledge of business applications can help you stand out.
